

Model TJE

Ultra Precision Wet/Wet Differential Pressure Transducer

DESCRIPTION

Model TJE Ultra Wet/Wet Differential is a bonded foil strain gage transducers designed to accept fluid in both ports and measure differential pressure ranges from 50 psid to 750 psid. Standard features such as overload stops and stainless steel construction provide unit durability in rugged industrial environments. Each is bi-directional and achieves accuracies of 0.1 % full scale.

A variety of standard options are available with the Model TJE Ultra including the traditional removable pressure adaptors for cleaning purposes, extended temperature ranges, alternative pressure ports, internal amplifiers options, and electrical terminations.

NOTES

1. Availability varies according to range.
2. Interconnecting shunt cal. 1 terminal with shunt cal. 2 terminal provides 50% (unamplified units), 75% (4 mA to 20 mA 3-wire units) or 80% (voltage amplified units of full scale output for quick calibration. Shunt calibration comes standard with internal amplifier options 2b, 2c, 2t and 2j.)
3. O=Orange, Y=Yellow, B=Blue, Bl=Black, R=Red, Br=Brown, W=White, G=Green. Color specifying cable and number or letter specifying connector.
4. No mating connector necessary for cable option.
5. Some pressure port options may require axial orientation.
6. Only available with unamplified option 2u.
7. Only available with amplified options.
8. Only available with Vdc output options 2b, 2c.
9. Consult factory for TEDS availability with amplified models.
10. Range dependent; consult factory. Termination dependent; consult factory.
11. Internal amp and termination dependent; consult factory.
12. 5000 ohm bridge required

Note: Unless otherwise specified on order, amplified units with 4 mA to 20 mA output will provide 4 mA at 0 psid and 20 mA at positive full scale and the unit will not operate in the negative direction. An available alternative is to specify 4 mA at negative full scale and 20 mA at positive full scale. All amps add 2 in to housing.
