

GLS Series

Miniature Global limit switch

Features

- Double break, direct opening contacts conform to IEC 60947-5-1-3
- EN50047 Mounting
- Dual bearing design on side rotary shaft
- Your choice of rugged metal or double insulated plastic housings
- Full range of actuator heads and levers
- Snap action, slow action basic switches
- Gold contact versions available
- Galvanically isolated contacts (Form Zb)
- Sealing up to IP67/NEMA 4
- CE, UL, CSA
- -40°C (-40°F) standard construction for side rotary and plunger styles

Benefits

- Forced opening of the normally closed circuit in the event of contacts welding
- Meets globally accepted mounting standards
- Prevents side loading
- Design flexibility
- Can be applied for both logic level and power duty loads
- Each contact throw can accept a different voltage (SPDT versions)
- Suitable for outdoor environments
- Designed to IEC electrical standard for world-wide use

Description

GLS miniature limit switches are designed to provide a complete range of globally approved products. These rugged and reliable limit switches are suitable for most industrial applications.

Side rotary versions offer a unique dual bearing design, which prevents side loading during application. The compact housing size makes them ideal for mounting where space is a premium. The extensive product range offers the user a choice of plastic, metal and three conduit version housings, which are all mounting compatible to EN50047. A wide range of actuator and circuitry options makes it easy for the user to customize a switch to his application.

Typical Applications

- Elevators and moving stairs
- Scissor/platform lifts
- Material Handling
- Packaging machinery
- Agricultural equipment
- Machine tool equipment

Low energy switching

In today's demanding age of low energy controls, electromechanical switches are frequently used to interface directly with PLC's and other low energy devices. To accommodate this requirement GLS offers a gold plated version of the standard basic switch. This improves reliability of switching at low currents and voltages by protecting the contact surfaces from contamination during operation or storage prior to use. Standard silver contracts have the disadvantage in that the contact surface may tarnish under certain environmental conditions e.g. in the presence of moisture.

Low energy basic switches are rated as follows:
 Operating Voltage U_e 1 to 50 Vac or dc
 Operating Current I_e 1 microamp to 100 mA

Electrical Ratings

IEC 947-5-1 / EN 90947-5-1								
Designation & Utilization Category	Rated operational current I_e (A) at rated operational voltage U_e						VA rating
